

Project Design Phase-II

Technology Stack (Architecture & Stack)

| | |
|---------------|--|
| Date | 03 October 2022 |
| Team ID | PNT2022TMID54168 |
| Project Name | Project – University Admit Eligibility Predictor |
| Maximum Marks | 4 Marks |

Technical Architecture:

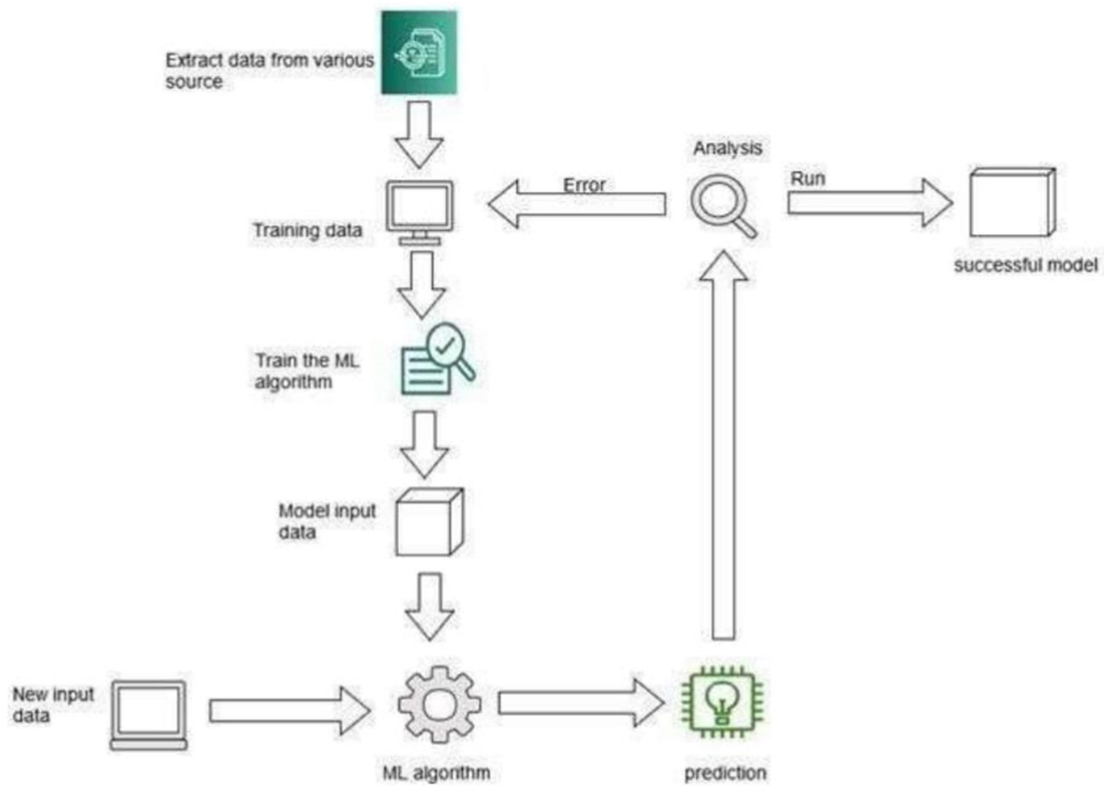

Table-1 : Components & Technologies:

| S.No | Component | Description | Technology |
|------|---------------------------|---|---|
| 1. | User Interface | How user interacts with application | HTML, CSS |
| 2. | Application Logic-1 | Logic for a process in the application | Python |
| 3. | Application Logic-2 | Logic for a process in the application | IBM Watson STT service |
| 4. | Application Logic-3 | Logic for a process in the application | IBM Watson Assistant |
| 5. | Database | Data Type (CSV FILE) | Kaggle website |
| 6. | Model of the data | Building model of the data | Machine learning |
| 7. | Libraries | Import libraries into data set | Pandas, Seaborn, Matplotlib, NumPy |
| 8. | Training and testing data | Purpose of data training and testing | Regression, Classification, clustering Algorithms, SK learn |
| 9. | Testing Data | Tests data using Agile methodology | Agile methodology |
| 10. | Accuracy | Accuracy of the tested and trained data | Mean squared error, Mean absolute error |
| 11. | Infrastructure (Server) | Application Deployment on Local System | Local |

Table-2: Application Characteristics:

| S.No | Characteristics | Description | Technology |
|------|------------------------|---|--|
| 1. | Open-Source Frameworks | List the open-source frameworks used | Flask framework |
| 2. | CSV file | Importing CSV file | Pandas |
| 3. | Data visualization | Perform data visualization | Matplot(pie charts, histograms) |
| 4. | Testing and Training | Create testing and training for the dataset | Technology used StandardScaler, MinMaxScaler |
| 5. | Performance | Design consideration for the performance of the application | Technology used IBM Watson |
